

Comprehensive Security Review Microsoft 365

Solutions tailored to you

SecureWon offers a complete security review of your Microsoft 365 environment. This process has been designed to align with industry best practices for enterprises and educational institutions. The review covers all critical security and compliance configurations within your tenant.

Our certified experts, with years of experience managing Microsoft 365 environments, will evaluate your configurations and provide actionable recommendations tailored to your organization's needs.

Our Audit Process

- 1 Identity and Access Management**
Control user access to resources, data, and systems securely.
- 2 Email and Communication Security**
Enhance protection against email-based threats and secure communication.
- 3 Collaboration Tools**
Ensure secure sharing and collaboration across Teams, SharePoint, and OneDrive.
- 4 Device Management**
Enable secure management of devices accessing your organization's resources.
- 5 Advanced Threat Protection**
Implement proactive measures to defend against modern cyber threats.
- 6 Compliance and Monitoring**
Maintain regulatory compliance and enforce retention policies.

Your report will answer questions like:

Are Conditional Access and MFA policies consistently applied across all users and applications?

Are email security configurations like SPF, DKIM, and DMARC protecting against spoofing?

Are external sharing settings for Teams, SharePoint, and OneDrive secure and aligned with organizational needs?

Are unmanaged devices prevented from accessing sensitive data and systems?

Is your organization protected against advanced threats?
